

# **ADJUSTMENT APPARATUS CAPABLE OF REMEMBERING SCREEN VIEWING ANGLE**

## **ABSTRACT**

- 5 An adjustment apparatus capable of remembering screen viewing angle mainly includes an adjustment device on a device body that equips with a screen. The adjustment device includes a body for housing a screw bar and an adjustment wheel. The adjustment wheel may be adjusted and turned by hands to drive the screw bar to extend forwards or retract rearwards so that the
- 10 bucking position of the head end of the screw bar against the action zone of the lid may be changed thereby to control the swinging angle of the lid, and adjust and remember the viewing angle.
